

Hayes O'Quinn

Computer Science Graduate | DevOps & Linux Infrastructure

San Antonio, TX • hayes@hayesoquinn.com • (210) 510-9405 • hayesoquinn.com • hayesoquinn • hayesoq

Education

BS **University of Texas at San Antonio**, BS in Computer Science – San Antonio, TX 2022 – 2026

- Concentrations: Software Engineering & Data Science

Technical Skills

Operating Systems / Infrastructure: Linux (Arch and Debian), Proxmox VE, LXC, Docker, systemd, AWS EC2

Networking / Web Operations: TCP/IP, DNS, DHCP, static addressing, SSH, Caddy, Nginx, reverse proxies, TLS, service monitoring

Automation / Development Tools: Bash, Python, Git, GitLab, JavaScript, TypeScript, C#, .NET, Angular

Data / Troubleshooting: Linux permissions, storage mounts, application debugging, network troubleshooting

Infrastructure Projects

Linux Homelab and Self-Hosted Infrastructure – Proxmox VE, Debian, LXC, Docker, Caddy 2026

Built and operate a virtualized Linux environment for self-hosted applications, networking, storage, and infrastructure administration.

- Installed Proxmox VE and provisioned isolated Debian containers with defined CPU, memory, storage, and network resources
- Deployed and maintained containerized services, including a reverse proxy, media applications, download automation, and remote-access tooling
- Configured DNS, DHCP reservations, static addressing, SSH, HTTPS reverse proxying, and internal service routing across a private LAN
- Mounted persistent ext4 storage with fstab and LXC bind mounts, then resolved ownership, permission, and application-access issues
- Diagnosed service failures, name-resolution problems, Ethernet negotiation issues, and application connectivity using system logs and Linux command-line tools

AWS-Hosted Database Web Application – AWS EC2, Linux, MySQL, PHP, Git 2025

Deployed and maintained a database-backed web application on a Linux cloud server.

- Provisioned and configured an AWS EC2 Linux instance to host the application and persistent MySQL data
- Deployed code updates through SSH and Git and troubleshoot server-side, database, and application errors
- Configured the web application for remote availability and verified production behavior after changes
- Live site: hayesoquinn.com

Experience

EControls, IoT Software Development Intern – San Antonio, TX June 2026 – Aug 2026

Developed and supported full-stack IoT software using Angular, C#, and .NET in a team-based engineering environment.

- Built and tested application features across Angular frontends and C#/.NET backend services
- Used Git-based development workflows to manage changes, review work, and collaborate with other developers
- Investigated defects across frontend components, backend APIs, and database-driven workflows using logs and debugging tools
- Worked with local development environments, dependency tooling, application builds, and iterative testing to deliver reliable changes

Peggy's on the Green / The Kendall Restaurant, Server / Bartender – Boerne, TX Dec 2022 – May 2026

Worked a demanding customer-service role while completing a Computer Science degree.

- Worked 30+ hours per week while completing a full-time degree, demonstrating reliability and time management
- Coordinated with team members in a high-volume environment while maintaining accuracy and clear communication
